

Figure 1 is a heatmap illustrating the percentage of correct predictions for the sign of the mean difference in utility distributions. The x-axis and y-axis both represent the 'Mean Difference in Utility Distributions (+/-)' with values: 0, 0.005, 0.01, 0.025, 0.05, 0.1, 0.25, 0.5, 0.75, and 1. The color scale ranges from 0% (white) to 100% (dark blue). The heatmap shows a diagonal band of high accuracy (dark blue) that narrows as the mean difference increases. The percentage of correct predictions is indicated by a color scale from 0% (white) to 100% (dark blue).
